

CI/CD

NguyenQuyBao

CI

- CI help automatize testing, compiling, linting, source validating and vulnerability, avoid to waste time with this activities.

CD

- Continuous Deployment focuses on built code and deployment
- The CD is responsible for deploy the application into development / stage / production environments and verify if the deployed services is running OK

COMPARE

Benefits	Drawbacks
Raise errors as soon as possible to avoid new costs	Less time of the "pizza time" during the deployment
Reduce downtime that gives more reliability to our clients and protect the company revenue	
Less infrastructure costs from unused resources	
Remove many manuals steps
